SUBJECT INDEX

VOLUME 43

Abelson lymphoma cells
  viral gene expression loss and retention of tumorigenicity, 92
Adenovirus
  DNA associated with nuclear matrix of infected cells, 705
  DNA replication, resistance to aphidicolin is dependent on the 72-kilodalton DNA-binding protein, 679
  polar encapsidation of DNA, 1132
Adenovirus type 3
  cloning and DNA sequence of the left end, 1132
α Genes
  herpes simplex virus, 1015
  regulation, 1015
AKR/J mice
  RNA leukemia viruses, genetic alterations associated with development of spontaneous thymic leukemia, 416
AKR mice
  ecotropic murine leukemia virus proviral sequences, 629
AKR mouse
  molecular cloning of a highly leukemogenic, ecotropic retrovirus, 943
Aleutian disease virus
  mink having antibody to both virion and nonvirion proteins, 608
  nonvirion protein identification, 608
Amber mutants
  bacteriophage ϕW-14, 67
Aphidicolin
  Fv-1 host restriction of Friend murine leukemia virus, 182
Autographa californica nuclear polyhedrosis virus
  polyhedron morphology mutant, mapping the mutation site, 809
  viral RNA capping in cultured *Spodoptera frugiperda* cells, 234
Avian leukosis virus
  cloned DNAs, analysis by microinjection of the biological effects of site-directed mutagenesis, 503
Avian reovirus
  polypeptides, analysis of intracellular virus-specified products, virions, top component, and cores, 1006
Avian reoviruses
  polymorphism of the migration of double-stranded RNA genome segments, 465
Avian retrovirus
  reverse transcription products analyzed by electron microscopy, 544
Avian sarcoma virus, 77
  c-*lil* characterization, 925

Baboon endogenous virus
  monoclonal antibodies, 664
Bacteriophage attachment capacity
  alteration by near-UV irradiation, 529
Bacteriophage ϕW-14
  amber mutants defective in DNA synthesis, isolation and preliminary characterization, 67
Bacteriophage heads, lambdoid
  antagonism between polyamines and tryptamine, 753
  stability, 753
Bacteriophage particles
  endo-*N*-acetylneuraminidase, 697
Bacteriophage T4
  capsid-length determination, genetic studies, 641, 655
  second-site revertants of a gene 23 mutation affecting capsid length, 641
Bacteriophage T4D
  possible length-determining template, 714
  tail core, evidence for an internal component, 714
Bacteriophage T5
  DNA, new physical map, 566
Bacteriophage T7
  DNA packaging in vitro by an isolated procapsid, 1138
  DNA packaging in vitro requires ATP, 365
Bacteriophage T7/T3, hybrid
  RNA polymerase genes, physical mapping, 844
Baculovirus, monoccluded
  Hz-1V, DNA characterization, 174
BALB/cNIV mouse strain
  mouse mammary tumor virus, unique, 158
B95-8 cells
  Epstein-Barr virus RNA, 262
β Gene
  detailed characterization, 1123
  herpes simplex virus type 1, 1123
BHK cells
  bunyamwera virus-infected, seven infection-specific polypeptides, 840
Bovine papilloma virus
  transcription, polyadenylated RNA species and assessment of the direction of transcription, 59
Bovine rotavirus
  core purification and characterization, 1113
E-5-(2-Bromovinyl)-1-β-D-arabinofuranosyluracil
  inhibitory effect on herpes simplex virus replication and DNA synthesis, 332
Bunyamwera virus
  BHK cells, seven infection-specific polypeptides, 840

Campoletis sonorensis
  ichneumonid parasitoid, 859
  virus with a multipartite superhelical DNA genome, 859
Capsid-length determination
  bacteriophage T4, genetic studies, 641, 655

C3H/HeN mouse DNA
murine leukemia virus-related DNA sequences, molecular cloning and characterization, 113
C3H/SM mice
mouse mammary tumor virus proviral sequences, 876
cis-acting function
Rous sarcoma virus genome, 482
c-*lil*
characterization, chicken cellular sequence associated with a stock of B77 avian sarcoma virus, 925
Core particles
ground squirrel hepatitis virus, 687, 741
hepatitis B virus, 687, 741
Cowpea mosaic virus
encoded protease does not recognize primary translation products of M RNAs from other comoviruses, 1151
CV1 cells
semipermissive variants, cold-sensitive growth of simian virus 40, 791
Cytidylic-guanylate sites
Herpesvirus saimiri DNA in tumor cells, 427
specifically unmethylated, 427

Defective interfering particles
RNA polymerase-associated interactions near template promoter sequences, 241
vesicular stomatitis virus, 241
Deletion mutants
simian virus 40, 489
Deletion mutants, early region
simian virus 40, 328
Deoxypyrimidine triphosphatase
herpes simplex virus-induced, 935
DNA hypomethylation
Epstein-Barr virus, 1129
nonproducer cell line EBR, 1129
DNA packaging in vitro
bacteriophage T7 procapsid, 1138
DNA polar encapsidation
adenovirus, 1132
DNA polymerase
vaccinia virus-encoded, genetic evidence, 673
DNA replication
adenoviral, 679
asynchronous bidirectional, 885
frog virus 3, 519
polyoma virus, 885

"Early" glycoprotein
characterization and possible role in immune cytolysis, 1046
herpesvirus-induced, 1046
Early region mutants
immunization against polyoma virus-induced tumor-specific transplantation antigen, 772
Ecotropic proviral sequences
identification in high- and low-ecotropic-virus-producing mouse strains, 1038
Embryonal carcinoma cell lines
polyoma virus mutant-infected, 800

Encephalomyocarditis virus
host translation inhibition, novel mechanism, 250
L cells, 250
Endo-*N*-acetylneuraminidase
bacteriophage particle-associated, 697
Envelope gene sequences
induction of erythroid cell proliferation, 223
spleen focus-forming virus, 223
Epidermodysplasia verruciformis
human papillomaviruses, biochemical characterization, 436
Epstein-Barr virus
DNA hypomethylation in the nonproducer B-cell line EBR, 1129
DNA molecule organization, 201
DNA, P3HR-1 deletion, 979
filamentous structures associated with infected cells, 305
fine mapping of boundaries of the internal repeat cluster of B95-8, 201
identification of additional small tandem repeats adjacent to the HR-1 deletion, 201
main component (gp350-gp220) responsible for generating neutralizing antibodies in vivo, 730
nontransforming strain P3HR-1, deletion causes fusion of the large internal repeat to the DS_1 region, 952
viral RNA in permissively infected B95-8 cells, 262
Epstein-Barr virus-determined nuclear antigen
chromatin-associated, evidence for two classes, 555

Feline sarcoma virus
monoclonal antibodies specific to transforming polyproteins encoded by independent isolates, 896
Fowlpox virus
infection, effects on lipid metabolism in cultured chicken embryo cells, 749
Friend murine leukemia virus
aphidicolin and *Fv-1* host restriction, 182
Frog virus 3
DNA replication in two stages, 519
F/St mice
retrovirus expression, unique features, 1
Fv-1 host restriction
aphidicolin, 182
Friend murine leukemia virus, 182

Gazdar murine sarcoma virus
genome-encoded proteins, identification by in vitro translation and comparison with Moloney murine sarcoma virus 124, 533
Glycoproteins gD and gE
herpes simplex virus type 1 DNA, 41
structural gene location, 41
GR mice
mouse mammary tumor virus proviral DNA acquisition in thymic leukemia cells, 819
Ground squirrel hepatitis virus
core particles, 687, 741
hepatitis B core antigen- and ground squirrel hepatitis core antigen-associated polypeptides, relationship, 687
protein kinase reaction, 741

Harvey murine sarcoma virus
cellular *ras* gene family, 294
monoclonal antibodies to the p21 products of the transforming gene, 294
HeLa cells
herpes simplex virus-infected and uninfected, 325
nucleoside analog triphosphates, differential effect on ribonucleotide reductase, 325
Hepatitis B virus
core particles, 687, 741
hepatitis B core antigen- and ground squirrel hepatitis core antigen-associated polypeptides, relationship, 687
protein kinase reaction, 741
Herpes simplex virus
α 27 gene promoter-thymidine kinase chimera, positively regulated in converted L cells, 1015
α gene regulation, 1015
class II defective genomes encoding infected cell polypeptide number 8, structure and expression, 574
deoxypyrimidine triphosphatase, control of expression in cells infected with mutants of types 1 and 2 and intertypic recombinants, 935
glycoproteins, processing, transport to the cell surface, and egress of virions from infected cells inhibited by monensin, 1102
HeLa cells, 325
mRNA species mapping in *Eco*R1 fragment I, 594
nucleoside analog triphosphates, differential effect on ribonucleotide reductase, 325
polysome-associated proteins in infected cells, 357
replication and DNA synthesis, inhibitory effect of *E*-5-2(bromovinyl)-1-β-D-arabinofuranosyluracil, 332
Xenopus laevis oocytes, mRNA and DNA-directed syntheses of exonuclease, 386
Herpes simplex virus type 1
apparently unspliced β gene mapping in the interior of another, detailed characterization, 1123
infectivity and glycoprotein processing, 1061
ricin-resistant cell line deficient in *N*-acetylglucosaminyl transferase I, 1061
structural genes for glycoproteins gD and gE and for other polypeptides in the S component of DNA, 41
tunicamycin, effect on glycoprotein synthesis, 395
Herpesviral proteins
association with the cell nucleus, definition of a series of stages, 314
Herpesvirus
cloned gene expression, 1091
"early" glycoprotein characterization and possible role in immune cytolysis, 1046
nuclear antigens from herpes simplex virus type 2 inverted repeat regions in transfected mouse cells, 1091
tupaia, protein kinase and specific phosphate acceptor proteins, 410
Herpesvirus saimiri
strain variability, 352
Herpesvirus saimiri DNA
tumor cells, specifically unmethylated cytidylic-guanylate sites, 427
Human cytomegalovirus
NIH 3T3 cell transformation, 83
strain AD169, 83
Human papillomaviruses
biochemical characterization, 436
epidermodysplasia verruciformis-associated, 436
Human rotavirus
animal rotavirus, sequence relationships between the genome segments, 379
sequence diversity of strains investigated by Northern blot hybridization analysis, 369
Hybrid selection
small RNAs by using simian virus 40 DNA, 987
Hz-1V
DNA characterization, 174
nonoccluded baculovirus, 174

Influenza virus
infectious cell entry mechanism, 284
Interferon
mink cell focus-inducing virus replication in murine cells, 213

JC virus
defective interfering particles or temperature-sensitive mutants and progressive multifocal leukoencephalopathy, 1143

Lambdoid bacteriophage heads
antagonism between polyamines and tryptamine, 753
stability, 753
Large T antigen
simian virus 40, 73
Large T antigens
phosphorylation pattern in mouse cells infected by simian virus 40 wild type or deletion mutants, 761
L cells
encephalomyocarditis virus-infected, 250
herpes simplex virus α gene regulation, 1015
host translation, inhibition of, 250

Mink cell focus-inducing murine leukemia virus
DNA fragment specific for xenotropic virus-related sequences, 348
molecularly cloned, 348
Mink cell focus-inducing virus
replication in murine cells, effect of interferon, 213
Molecular cloning
family of retroviral sequences found in chimpanzee but not human DNA, 914
highly leukemogenic, ecotropic retrovirus from an AKR mouse, 943
Moloney murine sarcoma virus 124
Gazdar murine sarcoma virus genome-encoded proteins, comparison, 533
Monensin
inhibition of the processing of herpes simplex virus glycoproteins, their transport to the cell surface, and the egress of virions from infected cells, 1102
Mouse cells
phosphorylation pattern of large T antigens, 761
simian virus 40 wild-type- or deletion mutant-infected, 761

Mouse mammary tumor virus
BALB/cNIV mouse strain, 158
proviral DNA acquisition in thymic leukemia cells from GR mice, 819
proviral sequences congenital to C3H/SM mice are differentially hypomethylated in chemically induced, virus-induced, and spontaneous mammary tumors, 876
Mouse strains
ecotropic proviral sequence identification in high- and low-ecotropic-virus-producing mouse strains, 1038
Mouse VL30 DNA sequences
early evolutionary origin, 511
locus polymorphism, 511
mRNA- and DNA-directed syntheses
herpes simplex virus-coded exonuclease in *Xenopus laevis* oocytes, 386
mRNA species
herpes simplex virus, 594
mapping in *Eco*RI fragment I, 594
Murine coronavirus
cell-free RNA translation, 905
Murine leukemia virus
DNA sequences of NIH/Swiss mice, 127
ecotropic proviral sequences in sublines of AKR mice, variation in the number of copies and in the genomic organization, 629
endogenous ecotropic DNA sequences in *Mus musculus* chromosomes, 26
related DNA sequences from C3H/HeN mouse DNA, molecular cloning and characterization, 113
Murine leukemia viruses, xenotropic
endogenous proviral DNAs, internal organization, 8
Murine "retrovirus-like" multigene family
genomic distribution and sequence heterogeneity, 50
Mus musculus
endogenous ecotropic murine leukemia virus DNA sequences in chromosomes, 26

Near-UV irradiation
bacteriophage attachment capacity alteration, 529
Neutralization epitopes
poliovirus, 997
Newcastle disease virus
coding assignments of the five smaller mRNAs, 1024
fatty acid modification of glycoproteins, 342
NIH/Swiss mice
murine leukemia virus DNA sequences, 127
NIH 3T3 cells
transformation with human cytomegalovirus strain AD169 cloned fragments, 83
NS protein
transcriptive activity regulated by site-specific phosphorylation, 104
vesicular stomatitis virus, 104
Nuclear polyhedrosis virus
Autographa californica, 809
polyhedron morphology mutant, mapping the mutation site, 809
Nucleoside analog triphosphates
herpes simplex virus-infected and uninfected HeLa cells, differential effect on ribonucleotide reductase, 325

Nucleoside analog triphosphates
herpes simplex virus-infected and uninfected HeLa cells, differential effect on ribonucleotide reductase, 325

Pichinde virus
synthesis of virus-specific polypeptides and genomic RNA, 273
Poliovirus
neutralization epitopes, analysis and localization with neutralizing monoclonal antibodies, 997
replicase protein, antibodies against a synthetic peptide, 969
Polyhedron morphology mutant
Autographa californica nuclear polyhedrosis virus, 809
mapping the mutation site, 809
Polyoma virus
DNA replication, asynchronous bidirectional, 885
immunization against tumor-specific transplantation antigen by early region mutants, 772
major capsid protein, charge microheterogeneity, 456
mutants able to infect embryonal carcinoma cell lines, physical and biological features, 800
mutant with normal transforming ability but impaired tumorigenic potential, 1072
reassembled, improved infectivity, 337
requirements for excision and amplification of integrated viral DNA molecules in transformed cells, 617
PRCII virus and Rous sarcoma virus
transforming proteins form a complex with the same two cellular phosphoproteins, 448
Progressive multifocal leukoencephalopathy
JC virus defective interfering particles or temperature-sensitive mutants, 1143

Rabies virus
vesicular stomatitis virus, homology between glycoproteins, 361
Replicase protein
poliovirus, antibodies against a synthetic peptide, 969
Respiratory syncytial virus
genome, negative-stranded DNA that codes for at least seven mRNA species, 150
Restriction enzyme mapping
vaccinia virus DNA, 136
Retrovirus
AKR mouse, 943
chromosomal clustering of five defined endogenous loci in White Leghorn chickens, 737
family of sequences found in chimpanzee but not human DNA, molecular cloning, 914
highly leukemogenic, ecotropic, molecular cloning, 943
Retroviruses
general infectivity assay, 1055
hybridization in situ, 1055
Retrovirus expression
unique features in F/St mice, 1
Reverse transcription products
analyzed by electron microscopy, 544
avian retrovirus, 544

RNA genome segments, double-stranded
avian reoviruses, migration polymorphism, 465
RNA leukemia viruses
genetic alterations associated with development of spontaneous thymic leukemia in AKR/J mice, 416
RNA polymerase genes
hybrid bacteriophage T7/T3, 844
physical mapping, 844
RNA translation
cell-free, 905
murine coronavirus, 905
Rotavirus
human and animal strains, sequence relationships between the genome segments, 379
human strains, sequence diversity investigated by Northern blot hybridization analysis, 369
tunicamycin effect on assembly and infectivity, 1082
Rotaviruses
human, in vitro transcription, 1032
Rous-associated virus 0
sequence of long terminal repeat and adjacent segments, 191
Rous-associated virus-2
viral glycoprotein synthesis, 756
Rous sarcoma virus
polypurine tract adjacent to the U_3 region of the genome provides a *cis*-acting function, 482
Rous sarcoma virus and PRCII virus
transforming proteins form a complex with the same two cellular phosphoproteins, 448

Simian virus 40
associated small RNA synthesized by specific cleavage from large viral transcripts, 987
cold-sensitive growth in semipermissive variants of CV1 cells, 791
defective genomes which complement for infectivity, isolation and characterization, 18
DNA, hybrid selection of small RNAs, 987
early region deletion mutants, isolation and characterization, 328
encapsidation, characterization of early intermediates, 830
host centriolar antigen stimulation in TC7 cells, requirement for RNA and protein syntheses and an intact small-t gene function, 721
large T antigen, discrete regions required for nonspecific and viral origin-specific DNA binding, 73
phosphorylation pattern of large T antigens in mouse cells infected by wild type or deletion mutants, 761
viable deletion mutants lacking sequences near the 3' end of the early region, construction and characterization, 489
Spleen focus-forming virus
envelope gene sequences which encode the gp52 protein, 223
induction of erythroid cell proliferation, 223
monoclonal antibody to gp52, 472
probe for amino-terminal region of retroviral envelope proteins that confers dual tropism and xenotropism, 472
Spodoptera frugiperda cells
Autographa californica nuclear polyhedrosis virus-infected, 234
viral RNA capping, 234

TC7 cells
simian virus 40-stimulated host centriolar antigen, 721
Temperature-sensitive mutants
hybrid infectivity assay, 37
isolation and genetic characterization, 778
vaccinia virus WR, 778
vesicular stomatitis virus, New Jersey serotype, 37
Theiler's murine encephalomyelitis virus
characterization of a cell culture persistently infected with the DA strain, 1118
Thymic leukemia cells
GR mice, 819
mouse mammary tumor virus proviral DNA acquisition, 819
Thymidine kinase gene
mapping and identification, 403
vaccinia virus, 403
Tumor-specific transplantation antigen
immunization by early region polyoma virus mutants, 772
polyoma virus-induced, 772
Tunicamycin
herpes simplex virus type 1 glycoprotein synthesis, 395
rotavirus assembly and infectivity, 1082
Tupaia herpesvirus
protein kinase and specific phosphate acceptor proteins, 410

Vaccinia virus
encoded DNA polymerase, genetic evidence, 673
phosphonoacetate-resistant enzyme, isolation from cytoplasm of cells infected with mutant virus, 673
restriction enzyme mapping of DNA, 136
thymidine kinase gene, mapping and identification, 403
Vaccinia virus WR
temperature-sensitive mutants, isolation and genetic characterization, 778
Vero cells
saturable binding sites for vesicular stomatitis virus, 871
Vesicular stomatitis virus
hybrid infectivity assay to analyze primary transcription of temperature-sensitive mutants, 37
New Jersey serotype, 37
NS protein, transcriptive activity regulated by site-specific phosphorylation, 104
rabies virus, homology between glycoproteins, 361
RNA polymerase-associated interactions near template promoter sequences of defective interfering particles, 241
saturable binding sites on surface of Vero cells, 871
transcription in vitro, initiation with GTP at a specific site within the N cistron, 166
Viral glycoprotein synthesis
Rous-associated virus-2, 756

White Leghorn chickens
chromosomal clustering of five defined endogenous retrovirus loci, 737

Xenopus laevis oocytes
herpes simplex virus-coded exonuclease, mRNA- and DNA-directed syntheses, 386

INDEX TO DATE OF ISSUE

Month	Date of Issue	Pages
July	16 June 1982	1–368
August	22 July 1982	369–760
September	19 August 1982	761–1154
